

Whirlpool Corporation Honored by EPA as a 2015 ENERGY STAR® Partner of the Year

The U.S. Environmental Protection Agency (EPA) has recognized Whirlpool Corporation with a 2015 ENERGY STAR® Partner of the Year award. The company received the award for its outstanding contribution to reducing greenhouse gas emissions by manufacturing energy-efficient products and educating consumers about energy efficiency. Whirlpool has received ENERGY STAR awards an industry-leading 25 times.

Since its inception in 1992, ENERGY STAR and its partners have helped prevent a total of more than two billion metric tons of greenhouse gas emissions. In 2013 alone, ENERGY STAR and its partners provided more than \$11 billion in societal benefits due to reducing damages from climate change.

In 2014, Whirlpool Corporation launched the first ever ENERGY STAR certified model in one of the last frontiers for energy efficiency left in homes: clothes dryers. Whirlpool also has won the ENERGY STAR Emerging Technology Award for the most efficient clothes dryer ever to be introduced into the U.S. market, with the ventless Whirlpool® brand HybridCare™ heat pump clothes dryer.

Whirlpool has been firmly committed to reducing the human impact on the environment since officially incorporating sustainability initiatives into the company's business strategy in 1969. In 1970, Whirlpool established its own Office of Environmental Control to develop more efficient products for consumers, develop more efficient manufacturing practices, and work with outside stakeholders on environmental and social responsibility.
